BCIP/NBT Substrate Solution

Product Number: NEL937

STORAGE CONDITIONS:

This product should be stored at 2-8°C.

PRODUCT DESCRIPTION:

This phosphatase substrate solution contain 5-bromo-4-chloro-3-indolyl-phosphate (BCIP) at a concentration of 0.21 g/L and nitroblue tetrazolium (NBT) at a concentration of 0.42 g/L in an organic base/Tris buffer. It is provided as 2 x 250 ml of ready-to-use solution, enough to cover ~2000 cm² of membrane.

PERFORMANCE CHARACTERISTICS:

This ready-to-use substrate solution deposits a permanent dark purple stain on membrane sites bearing phosphatase. Use at room temperature. The amount of substrate solution needed is determined by the size of the membrane being used. Use enough reagent to completely cover the membrane surface or at least 0.25 ml/cm² of membrane. It is also useful for, in situ hybridization.

USE OF REAGENT:

1. Incubate at room temperature until a dark purple stain appears at the phosphatase sites.
2. Stop the reaction by rinsing the membrane with reagent quality water to remove excess substrate. Air dry the membrane and store.
3. The point at which the reaction is terminated is determined by the rate of color development. The reaction should be stopped before background color becomes too intense, resulting in insufficient contrast between positive staining and background. To reduce the intensity of the substrate reaction, it is recommended that the phosphatase conjugate and/or antibodies in the assay be further diluted. Dilution of the substrate is not recommended.
4. For long term storage of the stained membrane it is recommended that the dried membrane be overlaid with a clear plastic and stored in the dark.

MEMBRANE COMPATIBILITY:

This substrate solution is formulated for use on PolyScreen® PVDF Transfer Membrane, nitrocellulose membranes and the nylon membranes GeneScreen™ Hybridization Transfer Membrane and GeneScreen Plus® Hybridization Transfer Membrane.

STABILITY:

The product is stable for a minimum of one year at 4°C. A fine black precipitate may develop on storage. The presence of this precipitate does not affect product performance.
